ANNUAL REPORT

for the fiscal year
ending March 31, 1991

Department of Government Services

92-07848/

The Honourable Lloyd Crouse
Lieutenant Governor
Province of Nova Scotia

May It Please Your Honour:

I respectfully submit the annual report for the Department of Government Services for the fiscal year ending March 31, 1991.

I have the honour to be, Sir,

Your obedient servant

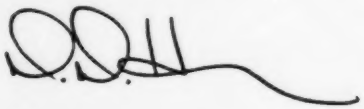
Neil J. LeBlanc

Honourable Neil J. LeBlanc
Minister of Government Services

Sir:

I hereby submit to you the annual report for the Department of Government Services for the fiscal year ending March 31, 1991.

Respectfully submitted,



Darrell Hiltz

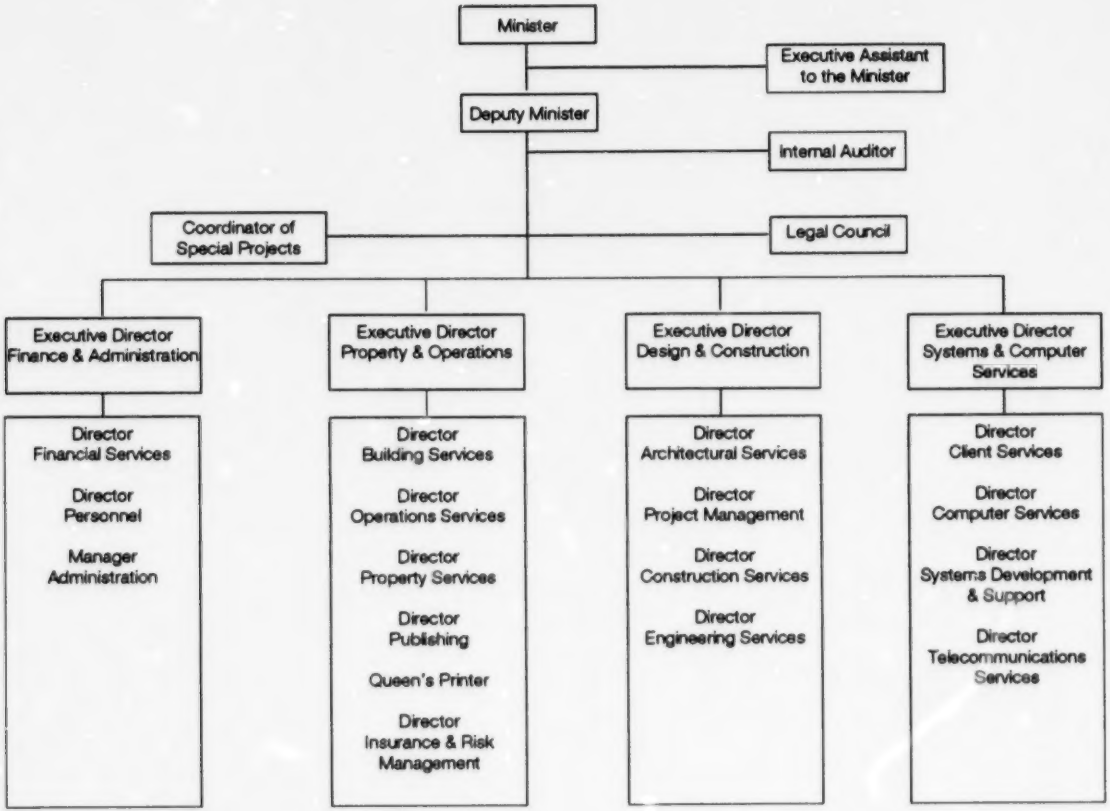
ORGANIZATIONAL CHART



DAILY SUPPORT SERVICES

The Department of Government Services provides services that support the daily operations of all government departments, agencies, boards commissions, Crown corporations, and the Legislature. It provides these services directly or through contracts with private sector suppliers in the most efficient and cost-effective manner.

The department is responsible for:

- providing accommodations, property maintenance, and security services
- developing a wide range of creative information products for public and internal information programs
- acquiring certain furniture, equipment, and other supplies required by departments
- providing for the interdepartmental delivery of mail and other goods
- disposing of Crown property
- administering a government-wide risk management and insurance program
- providing stationery and office supplies as well as records storage and inventory controls
- operating the provincial data and micrographics centres

The Department of Government Services offers other government departments a diverse array of professional and technical expertise. This expertise is contained in four major divisions—Design and Construction, Finance and Administration, Property and Operations, and Systems and Computer Services.

This group of about 650 employees located throughout Nova Scotia provides government with much of what is required to operate smoothly—from stationery to buildings, from couriers to telecommunications systems. The department also connects other government departments to private sector services such as architectural, construction, creative, and software development services. In these situations, our expertise is used to monitor the services provided.

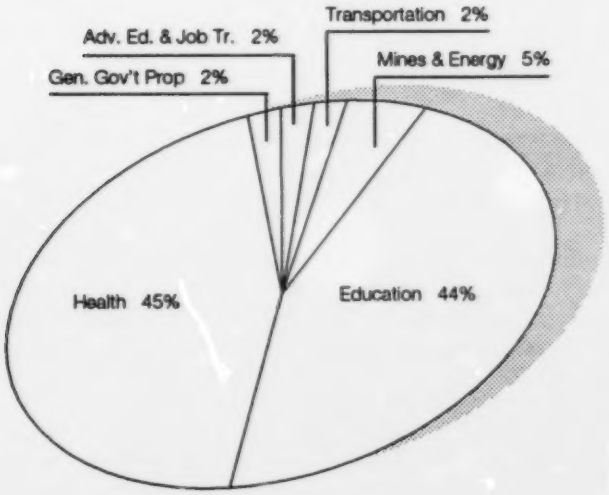
DESIGN AND CONSTRUCTION

The Design and Construction Division is divided into four sections, each providing expertise in a different area of building construction.

ARCHITECTURAL SERVICES

The Architectural Services section provides architectural conception, evaluation, and design work for construction projects, either directly or through the private sector. This section schedules projects during the design and tendering stages.

Capital Construction Expenditure by Department for Fiscal 1990–91



ENGINEERING SERVICES

Providing engineering and technical resources for construction and maintenance of government buildings is the role of the Engineering Services section. Staff in this section also approve mechanical and electrical designs prepared by private sector consultants, and provide

consulting services on specialized structural, mechanical, electrical, and allied engineering facilities for government.

CONSTRUCTION SERVICES

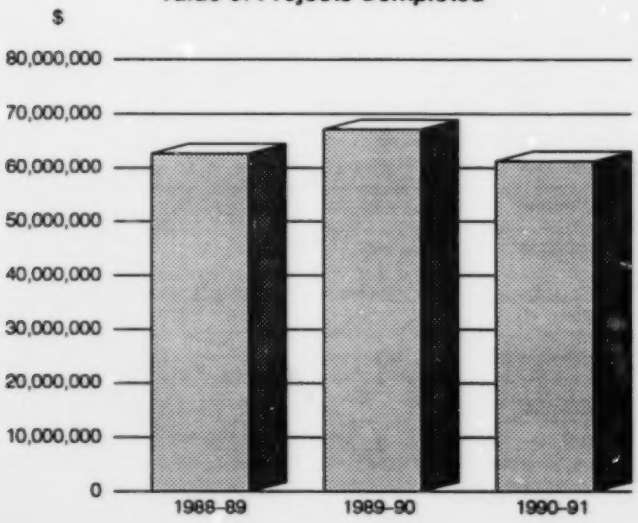
Renovations, alterations, and repairs to government buildings are carried out by the Construction Services section. This section also manages construction on small projects designed by Architectural Services staff.

PROJECT MANAGEMENT

The Project Management section is responsible for all aspects of major capital construction projects such as schools and hospitals.

The division managed 23 major capital projects in 1990–91, with a total estimated value of $258,381,000 under design. Design was completed, tenders called, and construction contracts awarded on capital projects valued at $116,287,220. Construction continued on major capital projects from the previous year, and were valued at $80,973,000, and major capital projects valued at $61,275,000 were completed.

Value of Projects Completed



FINANCE AND ADMINISTRATION

The Finance and Administration Division provides financial, administrative, and personnel services to the Department of Government Services through three sections: Financial Services, Administrative Services, and Personnel Services.

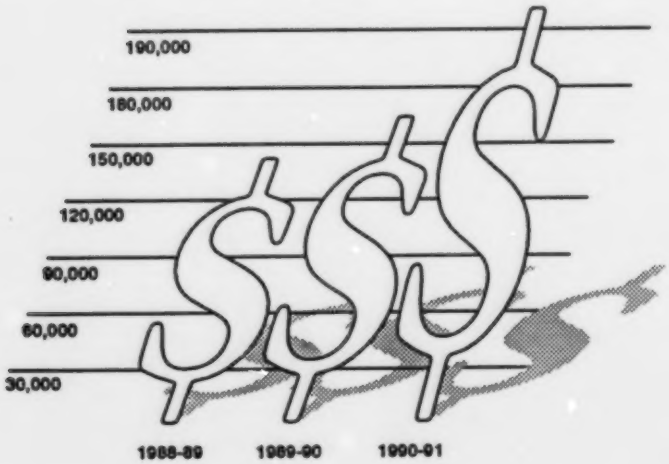
Activity in Finance and Administration is directly related to the level of service provided by other divisions of the department. The department's net expenditures for 1990–91 were $49,155,952. This amount, while significant, represents only part of the department's activities.

Gross expenditures totalled $99,214,022, of which $50,058,070 was charged to the government departments and agencies who used the various services provided by the department.

FINANCIAL SERVICES

Financial Services staff paid more than 192,500 invoices in 1990–91, a 13 per cent increase over the previous year. They are responsible for virtually all aspects of invoice processing except for cheque issuance.

Invoices



In December, a stand-alone computerized accounts receivable system was developed. The system records invoice and payment details for internal departmental clients and external clients (for example, Government Bookstore credit sales). A number of financial reports are available and departments are provided with aged quarterly reports. As at March 31, 1991, $2,001,278 in receivables was outstanding.

The Project Accounting and Management system was enhanced this year to include project accounting for capital transactions. Further refinements and updates will continue to be implemented.

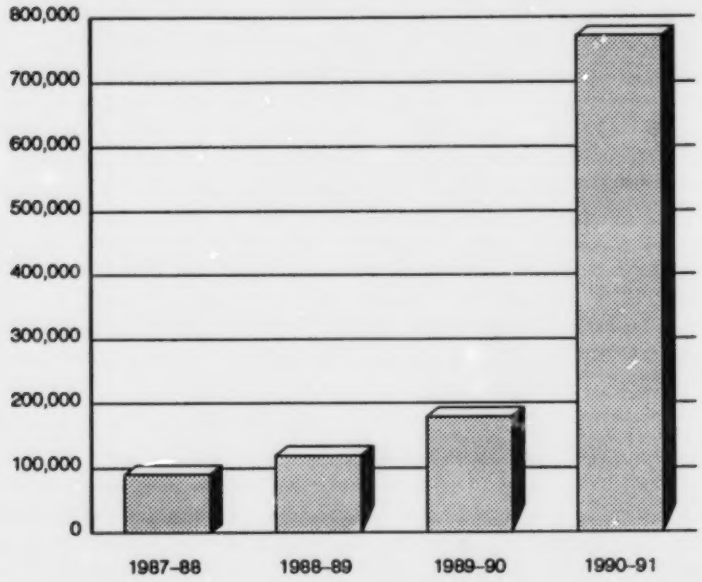
Each year, a department is appointed to head the annual United Way campaign to raise funds on behalf of provincial government employees. In 1991, the campaign will be under the direction of the Department of Government Services, Finance and Administration Division. During February and March, 15 people were recruited and a strategic plan developed.

ADMINISTRATIVE SERVICES

Administrative Services includes the Central Registry, facsimile facilities, the internal delivery and collection of mail, secretarial services, departmental switchboard, and the procurement of stationery and sundry supplies. By year-end, Central Registry staff had processed 771,237 pieces of correspondence, a 300 per cent increase over 1989–90. Requests for files totalled 10,252, an average of 34 requests per day, and 5,249 records were created during the year. As of March 31, 1991, 19,848 files were registered with the Registry.

The Central Registry's operation was fully automated in 1991, resulting in timely and accurate recording of all the department's records. In July, the department's records retention schedule was completely updated.

Central Registry Statistics
(Pieces of Correspondence)



Administrative Services again coordinated the collection of out-of-date Nova Scotia Government Directories and Maritime Tel and Tel Directories for recycling.

PERSONNEL SERVICES

Personnel Services is responsible for recruiting and developing an effective workforce. Staff coordinated the selection and appointment of 32 civil service positions, including two promotions from within Government Services. The department participated in the Employment Program for Persons with Disabilities, the Co-operative Education Program, and the Apprenticeship Program. Two permanent and one term Affirmative Action candidates were hired.

Personnel participated in the expansion of the Telecommunications section and the creation of the provincial Records Management section as well as other changes within the department.

Training and development of staff continued to be a priority for the department, with expenditures totalling $54,495. Professional development programs (including management and supervisory development) accounted for 52 per cent of expenditures; computer training, 23 per cent; communication skills, 8 per cent; health and safety and miscellaneous courses, 12 per cent; and specific degree-related programs, 5 per cent. In excess of 40 per cent of our employees have used the audio-visual training library, which is continuing to expand and which provides a cost-effective way of developing our staff.

Personnel services staff continued converting payroll systems to the Human Resource Management System (HRMS). Three of four payrolls were completed; the fourth is expected in the next fiscal year. Conversion of Leave Reporting to HRMS is also expected that year.

Personnel Services staff counsel management and staff on personal and work-related issues. Several grievances have been handled in an effective manner and the department approach to settling disputes has resulted in success.

The section also communicates with the Civil Service Commission, Management Board, departments, and external organizations on human resource issues.

Long service awards, for 25 years of service, were presented to Curtis S. McKenney, Eric C. Swinemer, Francis A. Smith, Herbert C. Taplin, and Keith E. Hines.

PROPERTY AND OPERATIONS

Government cannot work effectively unless it has the proper accommodations and equipment to carry out its day-to-day activities. Property and Operations ensures the efficient management of government property through six sections: Building Services, Property Services, Operations Services, Insurance and Risk Management, Publishing, and the Queen's Printer.

BUILDING SERVICES

The Building Services section's main function is the efficient operation and staffing of provincial office buildings. Building superintendents, caretakers, janitors, and commissionaires are hired to operate these buildings in an efficient manner.

Preventive maintenance is the key to successfully maintaining these buildings. Building Services staff tender, award, and monitor service contracts from the private sector for heating, ventilation, and air conditioning systems; boilers; elevators; fire and burglar alarms; snow removal; landscaping; and parking lot operation. The section also administers service contracts for other government departments. Staff prepare operating budgets for other departments for heating, ventilation, and air conditioning controls; elevators; boilers; and fire alarm services.

Over the past year, the Property Management section was expanded to include the Nova Scotia Museum of Industry in Stellarton. The museum is maintained under contract by personnel from the private sector, and supervised by staff from Building Services.

The Sydney office has put in place a Building Occupational Health and Safety Committee, representing all client departments for building-related safety problems of mutual concern. The Sydney Fire Department offered a fire safety and fire evacuation seminar, including a fire drill, information on operating a fire extinguisher, and a film at the Sydney Provincial Building.

Plans are under way for a seminar for the Cape Breton Region caretakers, which will include an emergency first aid and CPR course, along with additional building maintenance training.

Building Services also provides facilities for the preparation, issue, and withdrawal of employee identification cards. These cards were introduced to control access to government buildings and other property.

Building Services is also responsible for maintaining the two provincial golf courses, located at Digby and Pugwash. Both locations are staffed by fully qualified superintendents assisted by competent course workers. Both locations enjoyed an exceptionally good year, and the courses were on a par with others located in Nova Scotia.

PROPERTY SERVICES

Property Services is responsible for administering lease obligations between government and landlords. The department oversees 325 leasehold properties or 1,645,000 square feet of space. In addition to acquiring space, this section also disposes of real property surplus to government. Property Services called tenders for, and disposed of, 17 surplus properties.

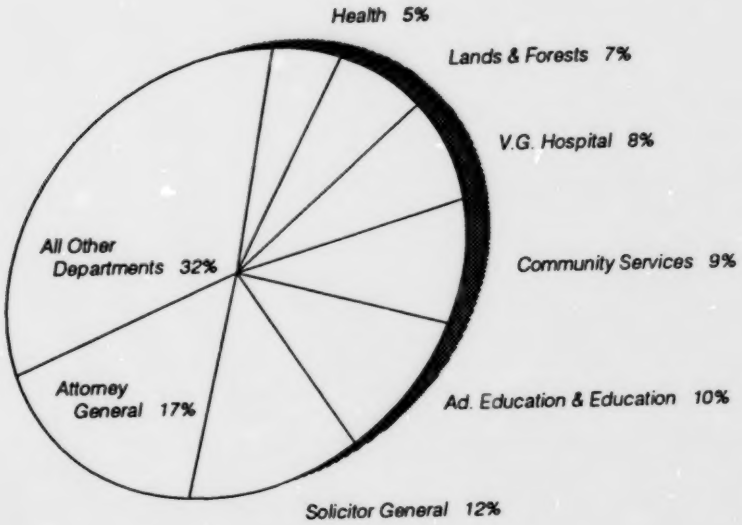
OPERATIONS SERVICES

Operations Services comprises four independent operations: the Stationary Stockroom, Provincial Records Centre, Inventory Control, and the Postal Services Branch.

It also maintains a fleet of 27 vehicles, of which 17 are owned and 10 are leased. These vehicles are used primarily by the maintenance sections, such as Electrical, Plumbing, and Carpentry. Other users include Postal Services and Design and Construction staff, who use vehicles for managing major capital projects. Through price incentives from the major gasoline companies, the cost of fuel for government vehicles has been reduced by 1.5 per cent. By reallocating government vehicles declared surplus, this section has assisted in reducing new vehicle acquisitions across government.

The centralized Stationery Stockroom provides a stationery supply service and issues common-user forms and other common-user supplies to all government departments. It uses bulk purchasing to perform its role as cost-effectively as possible. This year, staff issued 684,635 items, an increase of 5 per cent over last year, and processed 14,000 client orders, an increase of 7 per cent. The services were provided for a cost of $2,047,570.00, a decrease of 1 per cent from fiscal 1989–90.

Stationary Stockroom Supplies Issued



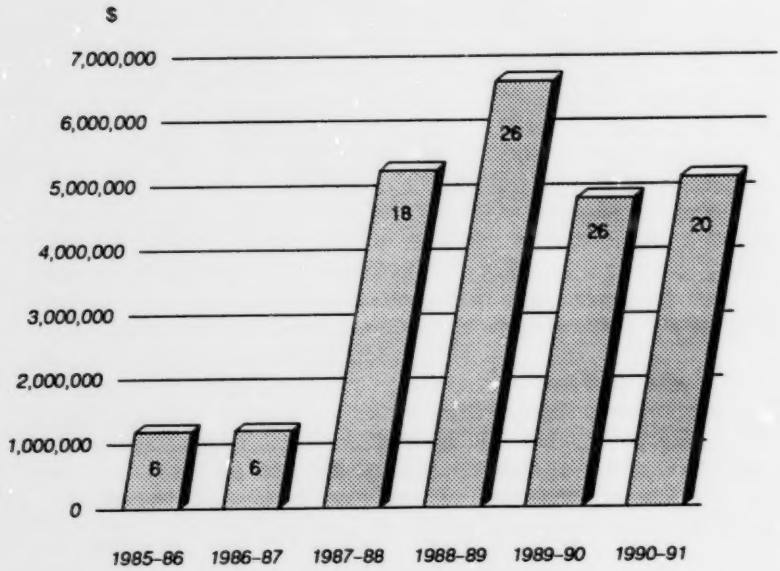
In compliance with the Occupational Health and Safety Act, first aid kits, supplies, and WHMIS labels were made available at the Stockroom on April 1, 1991. Also on that day, the Stockroom introduced recycling containers made of recyclable polyethylene, and recycled or environment-friendly paper in many high-volume products. Other products manufactured from recycled materials will become more available and affordable in the future.

In 1990–91, the Provincial Records Centre stored 24,520 boxes of hardcopy records and 9,477 rolls of microfilm. It responded to 10,686 file retrieval requests for 42 departments and agencies. In addition, it provided disposition of 17,927 boxes of inactive records, including those transferred to the Public Archives of Nova Scotia for permanent preservation. Confidential destruction is coordinated through the government recycling program, with sorting and shredding services provided by a contract with the Halifax Adult Services Centre. A satellite records centre in Sydney provides similar services for the Cape Breton region.

The Provincial Micrographics Centre provides a range of services and in 1990–91 filmed and processed 3,521 rolls of microfilm, loaded 10,880 jackets, and indexed 53,387 microforms.

The Inventory Control section verifies the capital asset inventories submitted by various departments and provides departments with information and services to maximize their use of surplus capital assets. As well, the section procures furniture and equipment for certain capital projects that the department administers. In the past year, there was an increase in the acquisition of capital assets to $5.1 million, while the number of capital projects dropped to 20 from 26.

Capital Assets Acquisition*



*The numbers in the bars indicate the number of capital projects for which furniture and equipment were acquired.

The section is implementing a common-user computerized inventory system. Three government departments are on line and government-wide implementation will be complete within three years.

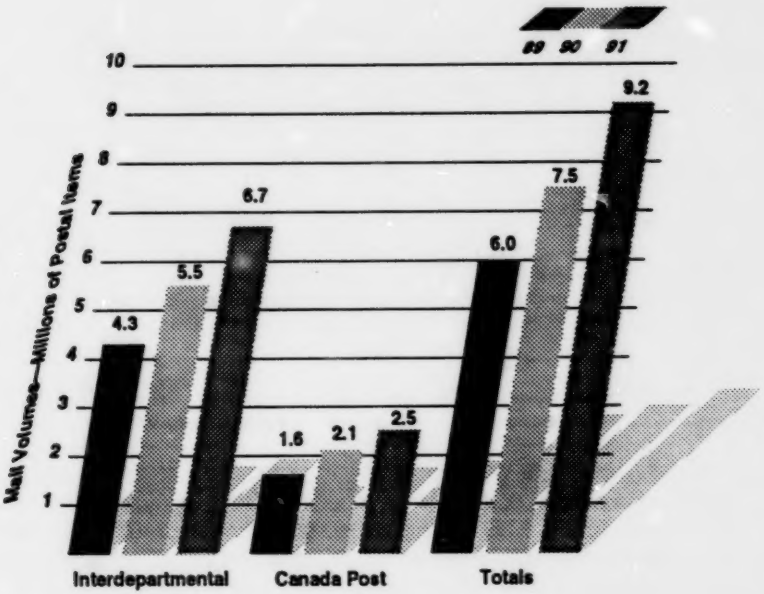
The redistribution of surplus capital assets within government has increased by 100 per cent over the last five years. The total value of these items has exceeded $417,000. In keeping with the Management Board policy of utilizing items within government, the Inventory Control section continues to develop and expand an efficient program to repair, refinish, or re-upholster furniture and equipment before these items are transferred to other departments. The Surplus Warehouse processed over 10,000 items last year, an increase of 3,000.

The department held 59 public auctions of surplus items, resulting in $53,600 being returned to the government. In 31 public tender calls for the disposal of surplus items, $37,700 was returned to the government. The section continues to make surplus Crown assets available to non-profit non-government organizations. These organizations have been given such items as hospital beds, office furniture, and school desks, valued at over $300,000.

The Postal Services Branch provides government with centralized access to a wide range of services and products, and with consultation on postal-related issues. It represents the provincial government in the acquisition of postal equipment and undertakes programs aimed at reducing costs while maintaining an appropriate level of service. Its programs include courier contracts, equipment service contracts, mass mailing programs, incentive rate controls, and privatization of selected services. It advises clients on the extent to which forms and envelopes must be standardized to qualify for Canada Post incentive rates.

This year, staff manipulated 9.2 million postal items throughout the Interdepartmental Delivery Services section. They processed mail for 285 customer accounts with expenditures up to $1,845,185, up from 150 accounts and $843,475 in postage for 1989–90. By the end of its second year, the PSB has developed and maintained 704 customer accounts, and increase of over 200 per cent.

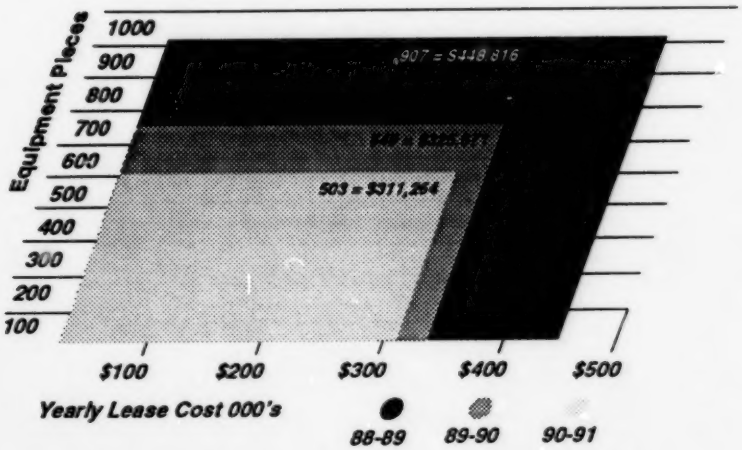
Mail Volumes



The second year of the province-wide next-business-day courier has already saved the Province about $190,000.

In addition to last year's elimination of 258 pieces of leased and rented equipment, further efforts by the PSB in this area have resulted in a net saving to date of $156,125, including the purchase of the new equipment required to implement incentive programs.

Postal Equipment Throughout Government



Finally, the PSB provides high-speed forms manipulation and signature imprinting of government cheques. The consolidation of these services under the PSB has saved the government $148,330. Greater emphasis on negotiations with Canada Post and incentive rate contracts have reduced postage costs by $75,000.

INSURANCE AND RISK MANAGEMENT

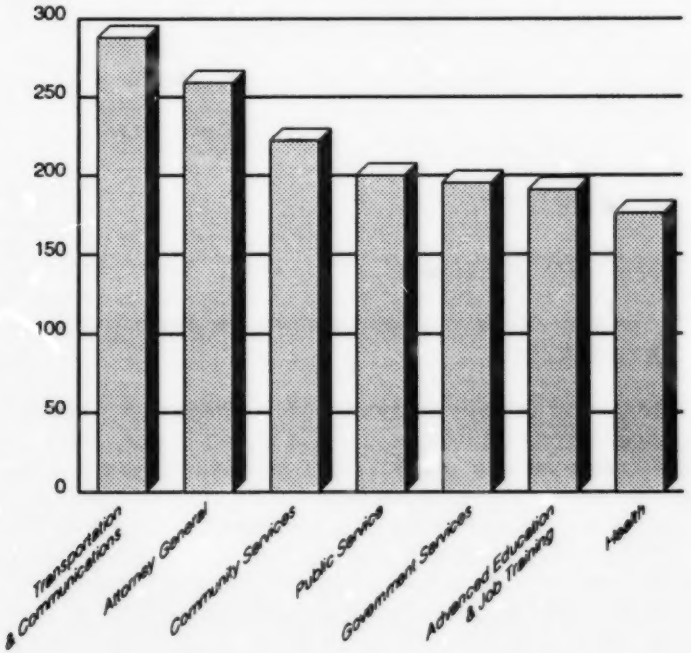
Insurance and Risk Management administered 190 insurance policies (28 for this department and 162 for other departments, boards, agencies and commissions) during 1990–91. These policies protect against the risk of major financial loss to the Province on owned and leased property and equipment, specialized computer equipment, elevators, boilers, machinery, motor vehicle liability, and aviation, marine, accident, and bonding exposures. The department's insurance, which was purchased through local provincially licensed brokers and insurance companies, cost $1,101,365. Insured values have increased 3.0 per cent over the last year, while premium costs decreased 0.75 per cent for the same period.

PUBLISHING

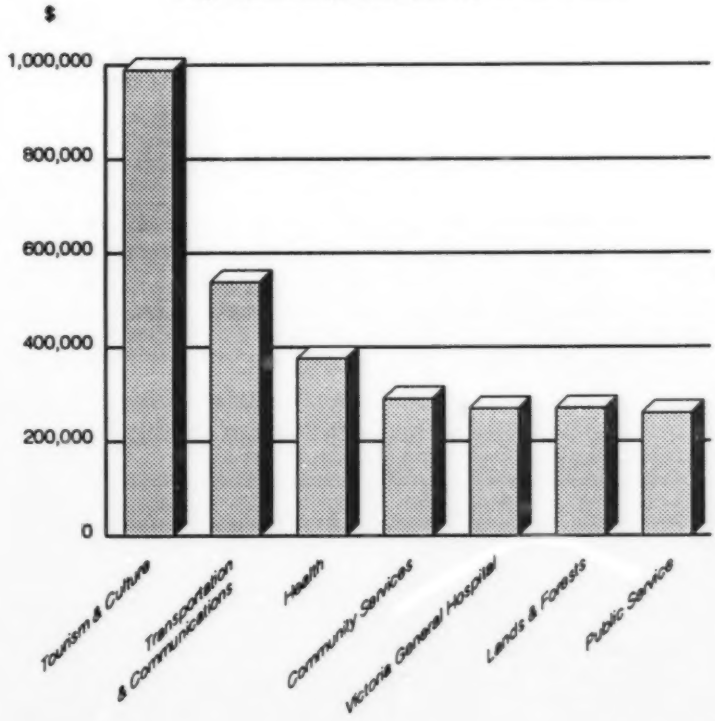
The Publishing section produces a wide range of creative information products such as brochures, posters, forms, and annual reports for public and internal programs for all branches of government. They provide creative design, editing and writing, typsetting and desktop publishing, printing, and project management services for these information programs, either directly or through the private sector.

Publishing staff produced about 2,446 projects, valued at nearly $5 million. The Department of Agriculture and Marketing's *Weed Identification Guide*, printed in both official languages, was so popular it needed to be reprinted as soon as it was released. The Keltic Lodge anniversary brochure, with its hand-tinted cover photograph, was another prestigious publication.

Top Seven Departments by Number of Projects



Top Seven Departments by Dollar Value



Exhibits and Displays staff provide design, panel photography, graphics, silk screening, and custom displays for all government departments to allow them to participate in trade shows, special events, and window displays.

Exhibits and Displays produced work for trade shows around the province, across Canada, and in the United States. Projects for 1989–90 were valued at over $177,000. Staff was far more involved this year than ever in managing the Boston Christmas Tree Display. They worked extensively with staff at the departments of Tourism and Culture and Natural Resources to update the display, which annually accompanies a Christmas tree to Boston to mark the support that city's residents offered Haligonians during the 1917 Halifax Explosion.

QUEEN'S PRINTER

The Queen's Printer provides the printing services for many of government's printing needs, materials ranging from envelopes and stationary to reports and brochures. The Halifax plant ran over 35 million impressions and two satellite plants in Truro ran more than 6 million. The Halifax location printed the *Throne Speech*, the *Budget Address*, the *Estimates of the Government of Nova Scotia*, and *Hansard*, maintaining the strictest possible security measures for security documents.

The Queen's Printer makes every effort to use environment-friendly products such as vegetable oil-based inks and recycled and alkaline papers.

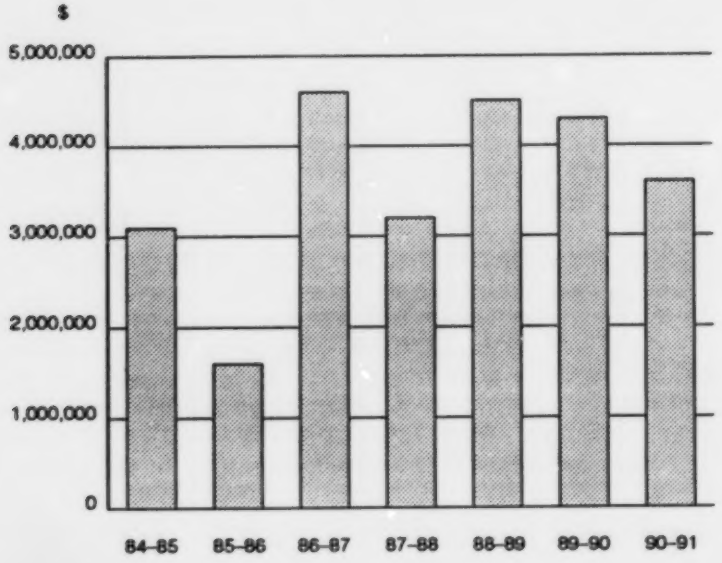
SYSTEMS AND COMPUTER SERVICES

Systems and Computer Services responds to government's data processing, micrographics, and telecommunications needs. It provides operational support and guidance and assists departments and agencies acquiring equipment and services.

Staff from Client Services, Computer Services, Systems Development and Support, and Telecommunications Services—the division's four sections—work closely with personnel in other departments, determining their systems needs and helping them learn to use their new systems.

Systems and Computer Services personnel also work closely with Management Board staff to establish policies for acquiring data processing services and equipment. Staff contribute to the Electronic Data Processing Advisory Committee's review of departments' long-range systems plans and equipment and service requests. The committee monitors and controls acquisition and implementation of automated systems in the provincial government.

Computer Capital Equipment Acquisition



CLIENT SERVICES

Client Services staff guide departments that are developing information systems and trying to define their requirements. This section also manages tenders for studies and equipment acquisitions. The number of tender calls decreased to 266 from 281. The value of tenders awarded also decreased, to $3,642,389 from $4,330,175. The value of contracted systems consulting and development services increased slightly to $2,682,739 from $2,664,493.

COMPUTER SERVICES

Computer Services manages and operates the government's shared information processing facilities. These include the Provincial Data Centre, the Micrographics Centre, and the Data Communications Network. The section also provides operational services, such as data entry and output distribution, for installed applications running at the central site.

The central site provided adequate computing capacity for all applications processed at the site. This was accomplished with no hardware or operating system upgrades. During the year, machine use grew by 6 per cent. The section developed plans to migrate to a new operating system and to add hardware features. After these are complete, one central processing unit will be removed, saving the government a substantial amount of money.

The number of remote terminal devices grew by 18 per cent in 1990–91 in response to increasing demand for remote access to the central system. At the end of the year, 1,777 remote terminals served government users. In order to ensure the system could adequately support all users and to use the telecommunications system cost-effectively, existing network processors were upgraded.

SYSTEMS DEVELOPMENT AND SUPPORT

Systems Development and Support manages the development of computer systems for client departments that will operate at the central computing site. The section continued to provide consulting services to its clients. As in the previous year, the majority of this work was a continuation of multi-year projects including ongoing development and support to the Human Resource Management System and the Registry

of Motor Vehicles System. During the year, the Vehicle Tax Collection System for the Department of Finance and the Accounts Receivable System for the Department of Lands and Forests were completed.

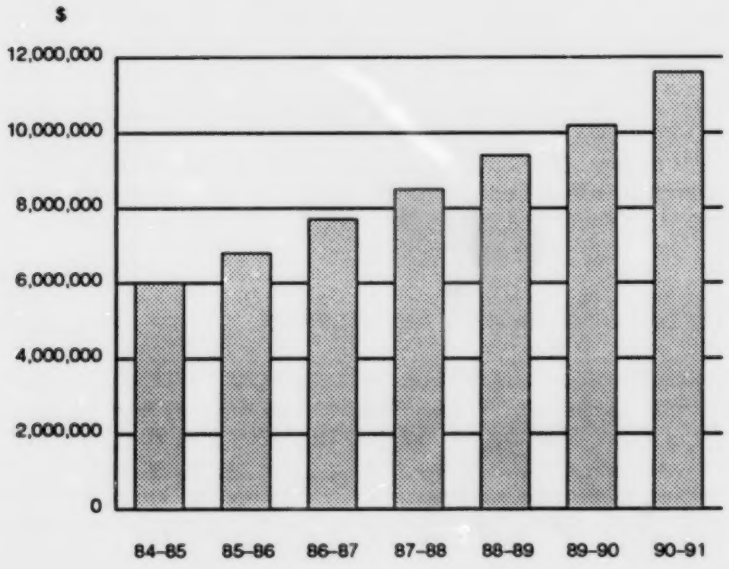
New system initiatives included redevelopment of the Admission/Separation System and the Psychiatric Reporting System for the Department of Health. Work on an Inventory System for the Department of Government Services, which could be implemented in all departments, also commenced.

Work also continued on several strategic projects including the Information Technology Architecture Plan and systems development methodology and code generators.

TELECOMMUNICATIONS SERVICES

The Telecommunications Services section manages government's telecommunications requirements. This section plans for government's day-to-day telecommunications needs, arranges for the acquisition of equipment and services, and is responsible for the installation and relocation or rearrangement of equipment and telecommunication lines.

Telecommunications Costs



Section staff continued its initiatives to modernize government's telephone systems and network, with the goal of managing costs and improving services to users. To this end, strong efforts were made to control the costs of systems and services and to evaluate and implement new technology throughout the fiscal year.

Digital centrex service was available in Halifax-Dartmouth, Sydney, Truro, Antigonish, New Glasgow, Kentville, Bridgewater, and Yarmouth to about 8,200 users. This service extension was virtually completed by the end of the year, as planned. The service may be extended to other smaller sites next year.

In order to minimize the effect of approved rate increases, a three-year stabilizing contract was put in place. A single line set replacement program was also completed. As well, several new integrated voice and data wiring systems were installed. These initiatives will allow the government to avoid significant cost increases.

New voice processing technology was examined this year and plans and recommendations were developed to permit introduction of this technology next year.

Planning began in 1990–91 for the department to assume responsibility for the provincial records management system, which was previously the responsibility of Management Board. A new section, Nova Scotia Records management, was established within the Systems and Computer Services Division. This section, in addition to providing the policy and management function that had been performed by Management Board, will assume operational responsibility for the Provincial Records Centre and the Micrographics Centre. The section will also provide advisory and training services to other departments.
